The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/782,467	Applicant(s) KIMURA, HITOTOSHI	
	Examiner LIEN TM NGO	Art Unit 3754	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Election/Restrictions

1. Applicant's election of Species B, fig. 6, clams 5, 6 and 8, in the reply filed on 1/2/08 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 5, 6 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Muto (EP 0924, 081) in view of Iida et al. (5,136,309).

Muto discloses, in figs. 15- 17, a liquid storage unit comprising a case having a first flexible partition member 89 attached to the case by a fastener 66 to define a liquid storage; a second flexible partition member 55 sealing an opening of the case by thermal welding; a protecting cover 68; and a carriage 74 for being reciprocated with the liquid election head mounted thereon.

Muto does not disclose the first flexible partition member thermally welded to the case.

Iida et al. teach, in fig. 4, and col. 6, lines 48-55, a flexible partition member 6-3 bonded to a case 6-1 by adhesion, welding or screws.

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the invention of Muto with the first flexible partition member thermally welded to the case, in view teaching of Iida et al., to bond the flexible partition member to the case.

4. Claims 5, 6 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ishizawa et al. (7,152,965) in view of Muto and Iida et al. (5,136,309).

Ishizawa et al. disclose, in figs. 9 and 14-16, a liquid storage unit comprising a case having a first flexible partition member 124 attached to the case to define a liquid storage; a second flexible partition member 144 sealing an opening of the case by thermal welding; a protecting cover 141; and a carriage for being reciprocated with the liquid election head mounted thereon.

Ishizawa et al. do not disclose the first flexible partition member thermally welded to the case.

Muto in view of Iida et al. teach a flexible partition member bonded to a case by welding or screws.

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the invention of Ishizawa et al. with the first flexible partition member thermally welded to the case, in view teaching of Muto and Iida et al., to securely bond the flexible partition member to the case.
